CONTENTS

PAET I

CHAP'

PAG*

I. Introductory..... I

II. Physical Conditions in an Open-Hearth Furnace System-Buoyancy 7

III. General Eemarks on Producer Gas..... 17

IV. Eaw Materials for Producer Working 21

(a) Solid fuels..... 21

(6) Oxygen necessary for gasification 22

V. Eeactions on Gasification in the Producer, Stoichiometric Eelations..... 25

(a) Carbon dioxide CO2, ratio of C to 0 and gas volume which is obtained from 1 kilogramme C .25

(b) CO formation. Air-gas.....27

(c) Simultaneous formation of C02 and CO by combustion of 0 by air 28

(d) Gasification of pure carbon by steam ... 28

(e) Production of CO and H from pure C and steam, Water gas 1..... 29

(/) Production of C02 and H from pure C and steam Water gas II..... 30

(y) Steam-air gas..... 31

(h) Carbon content of the gas..... 32

VI. Thermal Conditions in Gasification of Carbon ... 33 VII. Influence of the Individual Eeactions on the Temperature of Eeaction.....41

(a) Energy content corresponding to the heat of combustion of carbon.....41

(1} Temperature in the reaction zone in production of air-gas.....43

(c) Influence of the products of gas production on reaction temperature.....45

(d) Steam-air gas with pure CO formation ... 47

(e) Combustible value of the gas produced, and the efficiency of the producer..... 50

(/) Production of steam-air gas with high hydrogen content..... 52

(g) Steam-air gas production with preheated air . . 59
